

i GRAIN™ SNIFFER

EARLIEST POSSIBLE SPOILAGE DETECTION
Rapid Detection and Fast Action Eliminates Losses

Superior technology

After years of scientific research we are now launching this exquisite product. Some consider it ahead of its time. We proudly present it.

Total grain monitoring with a single multi-sensor device

The iGRAIN SNIFFER comes in two versions: iGRAIN SNIFFER-CO₂ that detects CO₂ and Temperature only.

iqGRAIN SNIFFER with multi sensors:

- Grain temperature
- Grain moisture
- Carbon Dioxide, CO₂
- Weather conditions
- Interfacing to an existing temperature system

Smart phone application

With the smart phone application the user can check on the grain condition at any time

Unique features

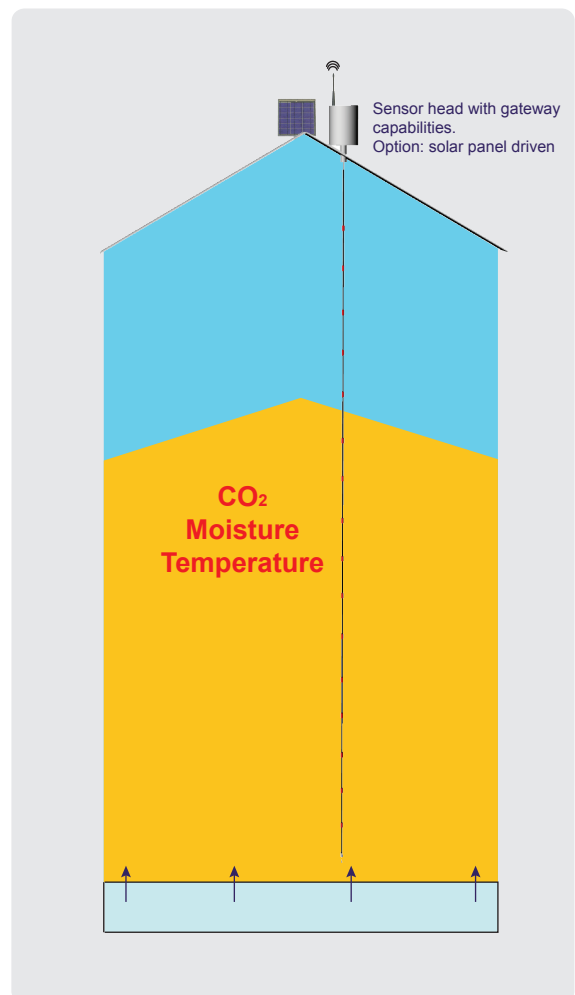

Early detection: Any type of biologic activity will produce Carbon Dioxide, CO₂. The iGRAIN sniffer has a very sensitive CO₂-sensor, and will detect biologic activity long before temperature sensors.

The CO₂ SNIFFER is much more than “early detection”, it is a true multi parameter monitoring and control system. Ideal to monitor single large bins, or be integrated in a network of sensors.

Control options

The iGRAIN SNIFFER interfaces with the iGRAIN PLC for automatic fan control.

CO₂ SNIFFER

The iGRAIN SNIFFER can interface with existing temperature monitoring sensor systems via the iGRAIN MULTIPLEXER

Probably the most intelligent grain monitoring and control system ever conceived
